

GPS Fleet Manager

GPS Fleet Manager

Track your fleet assets with GPS fleet management solutions from Preston Mobility in partnership with industry leader, BSM Wireless. Completely integrated with your wireless network, you can collect and track important real-time vehicle operation data. The benefits? Improve vehicle and driver safety, reduce fleet costs, and increase fleet operational efficiencies.

Best of all, your solution is will be fully supported and integrated by the skilled technical team at Preston Mobility.

“Improve your safety record - and run your fleet more efficiently with GPS fleet management solutions from Preston Mobility.”

Run Your Fleet More Efficiently

Gather, analyze and report on important trip detail and summary data. By monitoring each vehicle’s trip information over a specified timeframe, you can analyze key indicators and recommend improvements. You can track information such as:

- Ignition on/off
- Vehicle position
- Idling and stop times
- Distance travelled
- Stored position

Benefits:

- Improve vehicle and driver safety
- Reduce fleet costs
- Increase fleet operational efficiencies

Features

- Track real-time vehicle operation data
- Collect trip details and summary information
- Monitor fleet violations
- Set-up and monitor Geozones
- Gather idling time information fleet-wide

From an Industry Leader

Preston Mobility is proud to bring you intelligent GPS fleet management solutions from BSM Wireless. An industry leader, BSM Wireless has more than 60,000 subscribers across government, commercial and law enforcement sectors.

SAVE COSTS BY TRACKING IMPORTANT FLEET DATA

With Geozone monitoring, you can set up specific geographic zones, and track when your vehicles enter and leave these zones, as well as the length of time they remain in each zone.

Improve Vehicle and Driver Safety

With GPS fleet management solutions from Preston Mobility you can significantly improve vehicle and driver safety by tracking and collecting data on:

- Fleet violations, such as speeding
- Severe weather
- Acceleration and braking
- Selectable safety sensors

Reduce Fleet Costs

By tracking information on idling times, including total hours of fleet idling and average idling time per vehicle, you can make better decisions and recommendation to save valuable fleet costs.

How does it work?

The GPS fleet manager from Preston Mobility is a robust asset tracking platform for real-time fleet management. The system is compatible with your wireless cellular network. You receive a tracking modem for each vehicle in your fleet, along with asset-specific integration kits. Real-time data is sent back to a central computer and software program. With this data, you will be able to accurately track key fleet data indicators, and make better decisions to reduce fleet costs, improve vehicle and driver safety and increase operational efficiencies.

Can your business afford not to call Preston Mobility?
