

For Immediate Release

Preston Mobility Acquires On-Site Smartphone Repair Business; Launches Comprehensive Hosted Solutions for Wireless Customers

June 23, 2010 (Vancouver, BC). Preston Mobility, a local wireless business solutions provider and Bell Authorized Dealer, announces the acquisition of BerryPlusMore, an on-site device and smartphone repair company, as well as the launch of hosted solutions for small businesses. With the addition of these new services, Metro Vancouver businesses will no longer have to deal with multiple points of contact when it comes to customizing, hosting or servicing their wireless business solutions.

"Preston Mobility takes the hassle out of implementing a wireless solution for your business," states Darelle Mitchell, President of Preston Mobility. "We will be with you every step of the way, including repairing your devices on-site and providing a completely new level of service with hosted Exchange email and virtual server hosting."

Preston Mobility will now offer customers the ability to seamlessly integrate hosted solutions with their customized wireless services. These new services will enable small businesses to access the true functionality of their smartphones, including synchronized Exchange email. The comprehensive suite of hosted solutions options include:

- Hosted Exchange email with a BlackBerry Enterprise Server option
- Virtual private server hosting solutions
- Managed and dedicated hosting, including website, back-up, security, patching, troubleshooting and upgrading

With the acquisition of BerryPlusMore, Preston Mobility will add two service and implementation specialists to their team along with the ability to offer customers hassle-free on-site device implementation and repair services, including:

- Professional BlackBerry, iPhone and smartphone repairs
- Device-to-device contact record transfers
- Back-up and restore support options
- Device email account set-up
- Device deployment
- Technical expertise

Along with these services, Preston Mobility becomes the first wireless dealer to offer customers a "like-for-like" device loaner in the event a device is lost or needs repairs. "There's nothing worse than taking your smartphone in for repair and having it replaced with a standard issue cell phone with no access to key business functions like email, contacts and the Internet," explains Mitchell. "Our like-for-like replacement option virtually eliminates downtime."
